

INSTRUCTION MANUAL

POLMAR NEVADA

**SOLID STATE 40 CHANNEL
CITIZENS BAND 2-WAY RADIO**

POLMAR

SPECIFICATIONS

TRANSMITTER SECTION

POWER OUTPUT	4Watt Max (AT 13.8V DC)
EMISSION	6A3
SPURIOUS RESPONSE REJECTION	All harmonic and spurious suppression greater than F.C.C. and D.O.C requirements
MODULATION	AM, 90% typical

RECEIVER SECTION

CIRCUIT TYPE	Dual conversion superheterodyne with RF stage and 455 KHz ceramic filter
FREQUENCY	1 crystal-controlled PLL, 40channels in the 27 MHz Citizens Band
SENSITIVITY	10dB (S+N)/N; less than 1.0 μ V
SQUELCH RANGE	0-1mV
SELECTIVITY	70 dB down at \pm 10KHz
IF FREQUENCY	1st IF: 10.695MHz 2nd IF: 455 KHz
IMAGE REJECTION	55dB
AUDIO OUTPUT	3.5W maximum at 8 ohm load
CURRENT DRAIN	250mA on standby (no signal)
CURRENT DRAIN (MAXIMUM)	Less than 1.5A
ANTENNA	Nominal 50 ohms impedance
POWER SOURCE	Operates from nominal 12.6 volts DC, negative ground system
DIMENSIONS (OVERALL)	6 3/8"W, 5 7/8"D, 2"H
WEIGHT	3.5 lbs

WE RESERVES THE RIGHT TO MAKE DESIGN CHANGES OR MODIFICATIONS WITHOUT INCURRING ANY OBLIGATION TO INCORPORATE THEM IN PRODUCTS PREVIOUSLY SOLD.

INSTRUCTIONS APPLICABLE TO TRANSCEIVERS CARRYING SERIAL NUMBER 00000001 OR HIGHER.

THE FCC REQUIRES A LICENSE BEFORE YOU OPERATE THIS TRANSCEIVER

This model is designed to operate under FCC Rules and Regulations Part 95. Operation of this unit is not permitted until you have obtained the necessary FCC license. The Class D Citizens Band License may be obtained by any citizen over 18 years of age by filling out FCC license application form 505. You are required to read and understand the applicable FCC rules and regulations. These can be obtained from the Superintendent of Documents, Government printing Office, Washington 25, D.C., requesting Volume VI of FCC Rules and Regulations [which includes Part 95]. When you sign the application form you certify that you have read the rules and regulations. Remember courtesy on the air is the mark of A good operator. Always listen before you transmit. Choose the least crowded frequency for your communications.

TRANSMITTER IDENTIFICATION CARD

When you receive your license, you are required to fill out the Transmitter Identification card, FCC Form 452-C, which will be found with the unit. You should fill out the card as follows:

1. Fill in your call sign.
2. Fill in the name of the licensee.
3. Fill in the address where the license is located.
4. Previously answered
5. Date of license expiration should be entered.
6. Enter your signature

Affixed the card to the unit.

DESCRIPTION

This model is an all-transistor 2-way radio transceiver for mobile operation. A frequency synthesizer circuit provides 40 crystal controlled PLL transmit and receive channels in the 27 MHz Band, engineered for trouble-free performance. Your transceiver uses heat resistant transistors in all critical areas. Current drain on 12volts DC is exceptionally low. Operation over long periods is feasible even with your engine turned off. The transceiver may also be operated from A.C when used with an optional Power Supply.

RECEIVER

The receiver is a sensitive and highly selective dual-conversion superheterodyne type providing crystal-controlled PLL operation on all 40 CB channels. The circuit incorporates a number of features designed to provide optimum reception. The receiver incorporates an effective full time switchable Automatic Noise Limiter in the audio stages. A ceramic filter provides sharp selectivity and high adjacent channel rejection. As a result, transmissions on adjacent channels cause minimum interference.

A variable squelch control is incorporated to "silence" the receiver when no signals are being

received. The squelch circuit is adjustable providing varying degrees of sensitivity to incoming signals.

TRANSMITTER

The transmitter offers crystal-controlled operation on all 40 CB channels, 5 watt DC power input to the final RF with average modulation capabilities is possible by the use of high-efficiency Transistors and low loss components, wiring, and mounting boards. The legal limit of power for this service is provided.

POWER SUPPLY

The transceiver is ready for connection to a 12 volt DC, negative ground system. DC power is provided to the transceiver by means of a fused power lead.

OPERATING CONTROLS AND FEATURES

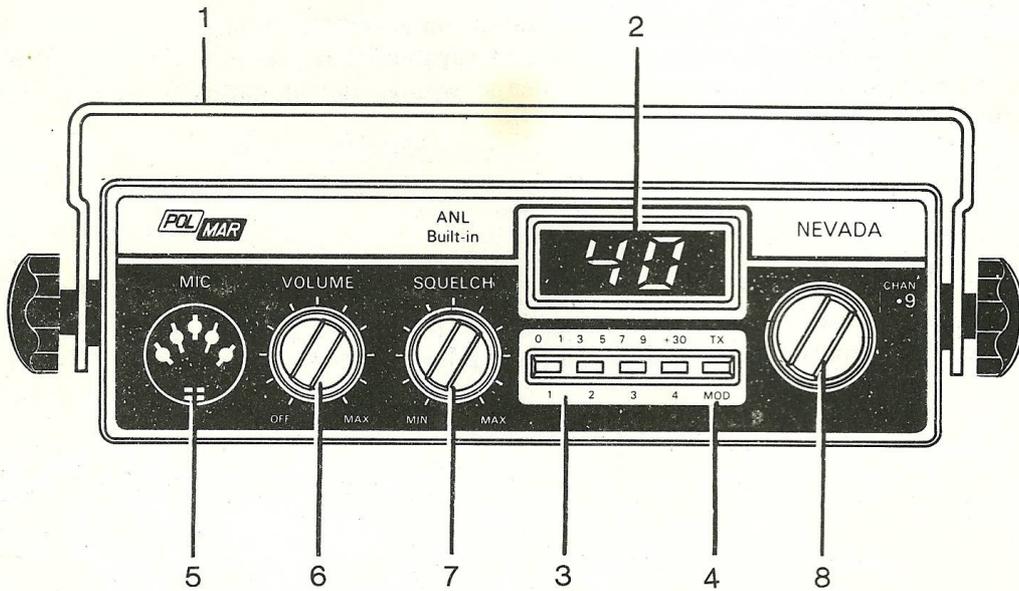

FIGURE 1

- (1) MOUNTING BRACKET Bracket simplifies installation-has "quick-release" feature for removal of unit.
- (2) L.E.D. DISPLAY L.E.D. (Light Emitting Diode) lamp Indicates the channel selected by 40 position rotary-switch.
- (3) LED S/P-RF LEVEL INDICATOR. At receive mode, some or all of the LED's will light up indicating the strength of the incoming signals by the number of LED's. In the transmit mode, it indicates the relative RF power output.

- (4) MODULATION/TRANSMIT LAMP. Red light indicates transmit mode. Light will vary in intensity with modulation rate.
- (5) MICROPHONE INPUT 5 Pin socket for push-to-talk microphone.
- (6) ON-OFF/VOLUME. Controls output from the built-in speaker, or external speaker connected to the "EXT SP" or PA jack (rear of transceiver). Incorporates "ON-OFF" power switch at the extreme counter-clockwise position.
- (7) SQUELCH CONTROL. Used to quiet the receiver during absence of receive signals. Sensitivity to incoming signals is fully adjustable.

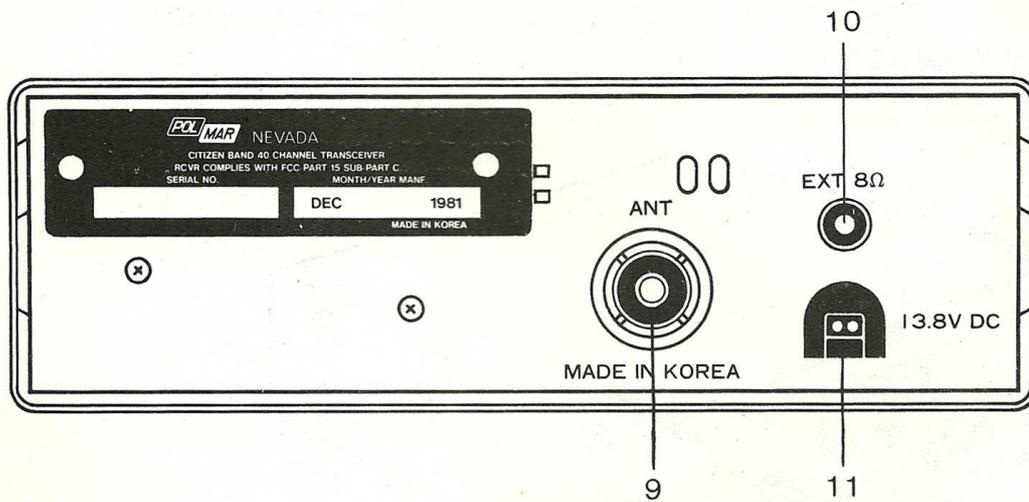

FIGURE 2

- (8) CHANNEL SWITCH This rotary switch selects one of 40 channels for transmit and receive operation.
- (9) ANTENNA CONNECTION To match antenna lead-in cable [RG-58/U or RG-8U] with PL-259 type coaxial connector.
- (10) EXTERNAL SPEAKER JACK Impedance of any device such as headphone connected to this jack should be 8-16 ohms. Insertion of plug into jack automatically silences the transceiver internal speaker.
- (11) DC POWER CORD STOPPER 12 volts DC for transceiver supplied through DC power Cable to this cord stopper.

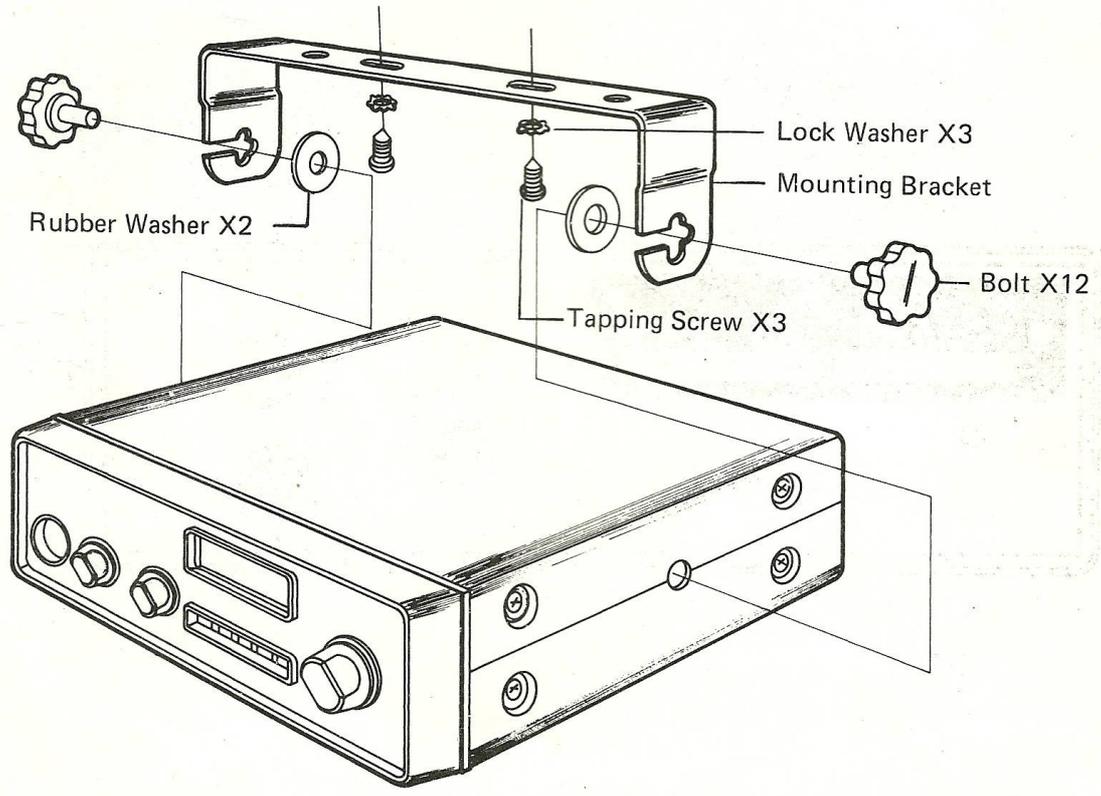

FIGURE 3 MOBILE MOUNTING

TRANSCEIVER INSTALLATION

MOUNTING

Always mount where controls are readily accessible. Unit may be mounted to the underside of the dashboard of a car, truck, etc., utilizing special bracket included with transceiver [see Figure 3]. Attach bracket to the underside of dashboard using the self-tapping screws supplied. Attach the transceiver to the bracket using the two knurled securing screws at the side.

Tilt the unit to the most convenient angle before tightening securing screws.

DC POWER CONNECTIONS

The transceiver is designed to operate from a battery source of 11.5 to 14.5 volts DC, employing negative ground electrical systems. The fused DC power cable supplied is used to make the necessary power connection to the transceiver. Red [fused] lead is connected to the positive [+] side of the electrical system and the black lead is connected to the negative [-] side of the system.

In a negative ground vehicle, connect the Red lead to the "hot" point in the electrical system [battery positive], and the Black lead to any point connected to the vehicle chassis [battery negative].

For connection to the "hot" battery side a suitable post can usually be found on the fuse block. The transceiver draws a maximum of 1.5 ampere of current, therefore you can use a terminal which supplies power to the Radio or other accessory [Use the unfused input side. The DC power cable is equipped with its own fuse]. Connection at this point will ensure DC power is automatically cut off to the transceiver when the ignition is turned off.

IMPORTANT: DC VOLTAGE AT THE TERMINAL SELECTED ON THE FUSE BLOCK MUST BE AT LEAST 11.5 VOLTS FOR PROPER OPERATION.

When you have completed the connections of the red and black leads of the DC power cable, attach the 3-pin female plug at the other end of the power cable to the matching male power connector at the rear of the transceiver. The plug can be inserted in only one direction for your convenience.

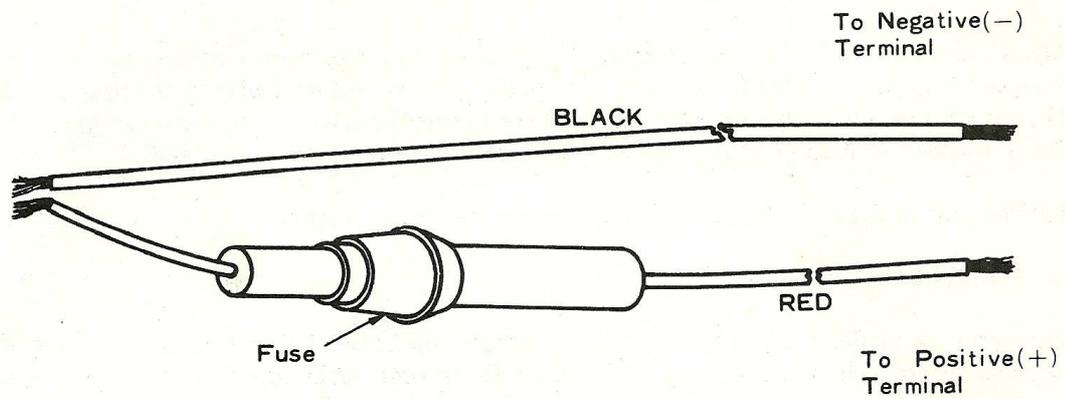

FIGURE 4. CONNECTING DC POWER CORD

ANTENNA CONNECTION

The lead-in cable from the CB antenna must be terminated with a PL-259 type male connector. Attach to the matching antenna input connector at the rear of the transceiver.

MICROPHONE BRACKET

Attach the microphone bracket provided to any convenient location.

MICROPHONE CONNECTION

Insert the 5-pin plug at the end of the coiled cord into the microphone socket.

DO NOT TRANSMIT WITHOUT AN ANTENNA CONNECTED TO THE TRANSCEIVER.

ANTENNAS

Efficient mobile operation requires the best possible radio frequency radiator or antenna. Many types are available including trunk mount, bumper mount, roof top mirror, etc. Selection is a matter of available space and personal preference. Virtually unlimited selection is available and you should consult your dealer for his specific recommendation. All good antennas are packaged complete with hardware and connecting cable. Usually no tools are required, although some mounting methods require a small hole be drilled. Remember if you have a choice generally speaking a longer antenna performs best and the higher the better.

IGNITION INTERFERENCE

Normally the suppression on modern automotive engines is adequate to prevent annoying interference to your CB transceiver. If it does not, consult your dealer who will recommend additional suppression measurements.

RECEIVING

1. Select desired channel using the channel Selector Switch.
2. Rotate "squelch" control to the extreme counter-clockwise position.
3. Rotate the "VOLUME/ON-OFF" switch clockwise, to apply power. Operation will be instantaneous.
4. Set the "VOLUME/ON-OFF" switch clockwise to a comfortable listening level [approximately 1/3 setting]. The receiver is now ready to operate.

SQUELCH ADJUSTMENT

The Squelch control eliminate annoying background noise in the absence of signals. To adjust the SQUELCH control properly turn up VOLUME until background noise is heard Rotate the SQUELCH slowly clockwise until the background noise just disappears. At this point the receiver will be quiet under "no-signal" conditions, however a reasonable strength incoming signal will overcome the squelch action and be heard. As the control is advanced the squelch action is progressively increased and stronger incoming signals are needed to overcome it. To receive weak signals or to disable the squelch circuit turn the control fully counter clockwise.

EXTERNAL SPEAKER JACK

Recommended plug for the EXT SPEAKER jack is a "TINIPLUG" subminiature phone plug. The impedance of earphones or speakers connected should be 8-16 ohms. Insertion of a plug automatically silences the transceivers internal speaker.

SIGNAL STRENGTH LEVEL INDICATOR

When receiving, this LED S/P-RF LEVEL INDICATOR provides a relative indication of signal strength in "S" units providing a means of comparison between one received signal and another.

TRANSMITTING

Prior to operating your transmitter do the following.

1. Your Class D citizens band equipment license must be posted at the main control station location.
2. A properly executed mobile identification card, 452C, must be affixed to the mobile unit.
3. Rules Part 95 must be read and understood.

To transmit, depress the push-to-talk button on the microphone. The Red Transmit Indicator light will come on and will "flicker" slightly as you speak into the microphone. Use the microphone like a telephone speaking several inches from the face. Do not shout, use a normal speaking voice.

When you are transmitting, the receiver is silenced and reception is, therefore, impossible. In the same way, your signal cannot be heard by another station when he is transmitting — each must take turns. To receive again, simply release the microphone push-to-talk button.

LED S/P-RF LEVEL INDICATOR

In transmit position the LED S/P-RF LEVEL INDICATOR gives a relative indication of antenna RF power output on the bottom power scale. As you speak, the pointer should "flicker" slightly, indicating you are modulating the RF carrier. The RF power meter will read true antenna power output when the transceiver is connected to a 50-OHM resistive load. The level indication will not be accurate if the load is mismatched but this will not adversely affect operation if a standard good quality antenna is used.

AVAILABLE CITIZEN BAND FREQUENCIES

Your transceiver provides operation on all available U.S. Citizens Band channels. Frequencies are listed in accompanying table.

Channel	Frequency	Channel	Frequency
1	26.965	21	27.215
2	26.975	22	27.225
3	26.985	23	27.255
4	27.005	24	27.235
5	27.015	25	27.245
6	27.025	26	27.265
7	27.035	27	27.275
8	27.055	28	27.285
9	27.065	29	27.295
10	27.075	30	27.305
11	27.085	31	27.315
12	27.105	32	27.325
13	27.115	33	27.335
14	27.125	34	27.345
15	27.135	35	27.355
16	27.155	36	27.365
17	27.165	37	27.375
18	27.175	38	27.385
19	27.185	39	27.395
20	27.205	40	27.405

TRANSCEIVER SERVICING

Transceiver has been fully tested prior to shipment and will not normally require further adjustments.

WARNING

As prescribed in Part 95.58, paragraph [e] of the FCC Rules and Regulations, the manufacturer of the transceiver is required to issue the following warnings:

1. Certain repairs and adjustments to this transceiver may be made legally only by a person in possession of a valid First or Second Class FCC Radiotelephone Operators License [or equivalent in Canada], or by a person under the direct supervision of a holder of such a license. This applies particularly to those repairs or adjustments, such as replacement of crystals and transmitter oscillator components, which might affect the transmitter's ability to comply with FCC regulations.
2. Use only approved replacement parts when servicing the transmitter. The use of a component [such as a crystal, semiconductor, capacitor, etc.] having different electrical characteristics and ratings than that originally used could result in a violation of the FCC Regulations and is therefore prohibited.

CRYSTAL CONTROLLED "PHASE LOCKED LOOP" SYNTHESIZING SYSTEM

This transceiver uses a frequency synthesizing system which employs two crystals and the PLL (phase locked loop) circuit to produce 40 transmitting and 40 receiving channels. The accompanying chart shows the operating mode.

VCO FREQUENCIES AND MIXING

CH NO	CHANNEL FREQ (MHz)	CRYSTAL OSC	VCO	
			T X	R X

INSTRUCTIONS FOR ALIGNMENT

PROTECTIVE COVER

Turn Transceiver over (speaker grille upward), and remove the facing chassis cover (2 screws each side). The speaker is connected by two leads to the main chassis so remove cover with care.

P.L.L CIRCUIT ALIGNMENT

10.24 MHz

Connect a frequency counter to the pin 12 and check to see 10,24000 MHz \pm 100Hz.

VCO ALIGNMENT

1. Set the Radio to channel 40 and in transmit mode. (make certain 50 ohm dummy load or wattmeter is connected to antenna terminal)
2. Connect a circuit tester between T.P.I and ground.
3. Adjust L203 to obtain +5.0V DC.
4. Set the Radio to channel 1 and in receive mode.
5. Check to see the T.P.I DC voltage dropping to a level between 0.3 to 1.0 volt DC.

As long as the DC level stays between 5.0V DC for Transmit at channel 40 and 0.3 to 1.0V DC for receive at channel, the VCO is set properly.

The magnitude of the T.P.I voltage swing is determined by C304 at factory. The optimum value of C304 was found to be around 60 pfd.

ALIGNMENT OF TRANSMITTER CIRCUITRY

RF DRIVER STAGE ALIGNMENT

1. Select channel 19.
2. Connect an oscilloscope to the base of Q301.
3. Adjust L204, L301, L302 for maximum amplitude of scope display (27.185 MHz)
4. Connect the scope to Q302 collector.
5. Adjust L303 for maximum amplitude on scope display.

RF POWER AMPLIFIER ALIGNMENT

1. Set power supply voltage to 13.8V and set the Radio to channel 19 position.
2. Connect a watt meter to the antenna connector.
3. Adjust L304, L305, and L306 for maximum power indication. Also again touch up L303, L302 and 301 to peak power.
4. When all coils are peaked, the power meter should indicate above 4.0 watt.
5. Turn L306 counterclockwise until the power reading of 3.8 watt is obtained.

TRANSMIT FREQUENCY CHECK

1. Set the Radio to transmit mode with no modulation.
2. Connect the frequency counter to the antenna load or to the tab provided at the wattmeter.

The frequency should be within $\pm 800\text{Hz}$ from each channel center frequency as tabulated in the frequency table attached.

MODULATION SENSITIVITY ALIGNMENT

1. [Set the unit into transmit mode and apply 20 mV, 1 KHz signal to the Mic input circuit.
2. RV 201 should be adjusted to obtain 85% modulation at this condition.
3. Next, decrease signal input to 6mV and observe that the modulation ratio is keeping the value higher than 60%.

RF METER ALIGNMENT

Adjust RV202 so that the meter pointer should indicate the same wattage as the reading obtained on the wattmeter. Refer to "3.6" in this alignment procedure.

ALIGNMENT OF RECEIVER CIRCUITRY

RECEIVER SENSITIVITY ALIGNMENT

1. Set the signal generator at 27.185 MHz, 1 KHz and 30% modulation. Also set the radio at channel 19 position.
2. Adjust L204, L101, L102, L103, L104, L105, L106 and L107 for maximum audio output across the 8 ohm dummy load resistor.

This alignment should be performed by gradually decreasing the signal generator output signal to a minimum level required for tuning to avoid inaccurate alignment due to AGC action.

SQUELCH CIRCUIT ALIGNMENT

1. Set the signal generator to provide RF input signal of 54 dB (1 KHz, 30% modulation.)
2. Rotate the squelch control in full clockwise direction.
3. Temporarily adjust RV 101 for maximum audio output, and note the audio output level. Then, adjust RV 101 so that the audio output level decreases by 6dB.

S-INDICATOR ADJUSTMENT

1. Set the signal generator to provide 40 dB signal output.
2. Adjust RV103 so that the S-indicator read S "9" on the indicator provided on the front panel.

RETURNING THE UNIT FOR SERVICE

In the event repair is necessary please return unit to the store from which it was purchased. If necessary to return to our service head quarters, pack your transceiver extremely carefully. Use UPS prepaid. Please enclose a description of difficulty experienced as well as when and where unit was purchased.

TEMPORARY PERMIT TO OPERATE A CB RADIO STATION

(DO NOT MAIL THIS FORM-IT IS YOUR TEMPORARY PERMIT)

INSTRUCTIONS

1. Use this form only if you want a temporary permit while your regular application, FCC Form 505, is being processed by the FCC.
2. You must have a temporary permit or a license from the FCC to operate your Citizens Band radio transmitter(s).
3. Complete all items on this form.
4. Do not use this form if you already have a CB license.
5. Do not use this form when renewing your CB license.

LIMITATIONS OF THIS PERMIT

1. Your authority under this permit is subject to all applicable laws, treaties and regulations and is subject to the right of use and control by the Government of the United States.
2. This permit is valid for 60 days from the date you mailed the FCC Form 505 to the FCC.

COMPLETE THE BLOCKS BELOW
AS INDICATED TO DETERMINE YOUR
TEMPORARY CALL SIGN

Initial of Your First Name Initial of Your Last Name Your ZIP Code

YOUR (APPLICANT'S) NAME	DATE YOU MAILED FCC FORM 505 TO FCC
MAILING ADDRESS (Number & Street, City, State, ZIP Code)	

CERTIFICATION

I hereby certify to the following: I am at least 18 years of age. I am not a representative of a foreign government. I have applied for a Citizens Band Radio Station License by mailing a completed FCC Form 505 to the Federal Communications Commission, Gettysburg, Pennsylvania 17326. I have not been denied a license or had my license revoked by the FCC. I am not the subject of any other legal action concerning the operation of radio station.

IF YOU CANNOT CERTIFY TO ALL OF THE ABOVE, YOU ARE NOT ELIGIBLE FOR A TEMPORARY PERMIT.

WILLFUL FALSE STATEMENTS VOID THIS PERMIT AND ARE PUNISHABLE BY FINE AND/OR IMPRISONMENT.

Using Your Citizens Band Radio Station

(See Part 95 Subpart D of FCC Rules & Regulations for Complete Instructions on Authorized Station Use.)

Welcome to the Citizens Band Radio Service

Citizens Band Radio is a shared communications service with many people using the same frequencies and channels.

The guidelines provided in this form are not intended as a substitute for FCC Rules, but as a general reference to those operating practices and procedures which will benefit you and other users of a Citizens Band Radio.

Your compliance with these guidelines and your consideration for the rights of others in your radio service is necessary if the full potential and enjoyment of Citizens Band Radio is to be realized.

1. Who May Operate My CB Radio Station?

You, members of your immediate family living with you, and your employees, while on the job.

2. How Many Transmitters Does this Permit Authorize?

A maximum of twenty-five (25).

3. Can the FCC Inspect My Station?

Your station and station records must be available for inspection by an authorized agent of the FCC.

4. Where Should I Keep My Permit?

You must keep your permit in your station records or post it at your station.

5. How Shall I Identify My Station?

Identify transmissions in English with your temporary call sign.

6. How Can I Use My Station?

Use it for private short-distance radio-radiocommunications for your personal or business activities. Channel 9 is reserved solely for emergency communications and to assist motorists.

6. How Can I Use My Station? (continued)

Prohibited Communications Include:

- Activities contrary to law
- Transmitting obscene, indecent or profane messages
- Communicating with non-CB Stations
- Intentional interference to other radio stations
- Transmitting for amusement, entertainment, or over a public address system
- Transmitting false distress messages
- Advertising, selling, or for hire

7. How High May I Put My Antenna?

See CB Rule 18 to determine your antenna height.

8. May Amplifiers Be Used With My Transmitter?

'Linear' amplifiers are absolutely prohibited. 'Power' microphones may require adjustments to your transmitter.

9. Who Can Make Adjustments to My Transmitters?

Adjustments affecting proper operation may be made only by, or under the supervision of a licensed first or second-class radio operator.
